

9th International PGM Conference

Zimplats SO₂ Abatement Plant Design

27 October 2025

By: J. Bezuidenhout (Hatch), G. Erasmus (Hatch), S. Matutu (Zimplats)

Sulfuric Acid Plants in the World Today

Data from: http://www.sulphuric-acid.com/sulphuric-acid-on-the-web/acid%20plants/Acid_Plant_Index.htm

The Smelter Expansion and SO₂ Abatement Project

Smelter Expansion at Zimplats SMC

- Zimplats owns and operates the SMC smelter complex and various concentrators and mines in Zimbabwe
- The requirement to increase the smelter concentrate throughput by almost 3 times:
 - Treat concentrates from a third module concentrator
 - 3rd Party sources such as Mimosa
 - Tailings scavenging facilities to improve overall metal recovery

Smelter Expansion and Ramp-up Off-gas Handling

- New 38 MW electric furnace
- Two 12 x 24 ft Peirce Smith Converters
- Converter spay coolers
- 160 m tall stack

Smelter Expansion at Final SO₂ Abatement

- Wet Gas Cleaning Plant
- WSA Plant

Process Design Criteria Development

Smelter SO₂ Off-gas Sources

Electric Furnace

- Steady off-gas flow and SO₂ strength
- Labile sulphur liberated from minerals
 - $\text{Ni}_9\text{Fe}_8\text{S}_{15} \square 3\text{Ni}_3\text{S}_2 + 8\text{FeS} + \text{S}$
 - $2\text{CuFeS}_2 \square \text{Cu}_2\text{S} + 2\text{FeS} + \text{S}$
 - $\text{Fe}_7\text{S}_8 \square 7\text{FeS} + \text{S}$
- Typically, ~3 vol% SO₂

Peirce-Smith Converter

- Cycled off-gas flow and variable SO₂ strength
- $\text{FeS} + 1.5\text{O}_2 \square \text{FeO} + \text{SO}_2$
- Typically, ~6 vol% SO₂

Off-gas Volume Optimisation

- Sizing the downstream off-gas equipment starts with optimising the flowrates at the source:
- Furnace off-gas:
 - Potentially halve the off-gas flow by installing tight fitting electrode seals
 - Additional benefits include
 - Less dust carry-over
 - Lower system pressure drops/fan power
 - Furnace consumption (SEC)
- Converter off-gas:
 - Tight fitting water-cooled primary hoods, targeting a gas-air infiltration ratio < 1

Acid Plant Inlet Profiles

- Combination of furnaces and converters create a wide flowrate and SO₂ concentration operating window

Acid Plant Inlet Profiles

- The cyclical nature of the converter operation introduces further variability over shorter time periods

Acid Plant Inlet Profiles

- Characterisation of the furnace and converter off-gas is essential at the start of the project as input into the Process Design Basis
- Isokinetic sampling is necessary if continuous measurements are not available

Technology Selection

Technology Selection

- Screening of available and proven technologies is done early with typically three options identified for further study

Technology Selection

Ranking:	3 - Superior
	2 - No differentiation
	1 - Inferior

Grouping	Subgroup	Category	Weight	A		B	
				Rank	Value	Rank	Value
Fatal Flaws	Fatal	Saleable Product	Fatal	Yes	OK	Yes	OK
		Meeting Legislation requirements	Fatal	Yes	OK	Yes	OK
Critical	Risk and SHE	Safety and hazards concerns in operations (# of)	5	1	13	3	10
		Complexity (number of rotating equipment)	5	2	9	2	7
		Commercial installations - total	10	1	13	3	133
		Commercial installations - metallurgical	10	1	1	3	14
		Commercial Installations - proposed flowsheet	5	2	1	2	2
	Cost	Capital expenditure - Future Case (\$ million)	10	2	26.0	2	23.9
		Operating expenditure - Future Case (\$million/year)	15	3	1.4	1	1.7
	Technical	Expandability	10	2	-	2	-
		Workshop feedback	50	2	-	3	-
		Footprint (m x m)	5	2	50 x 42	2	50 x 40
Important	Resources	Process energy / additional energy requirements	5	2	-	2	-
		Electrical energy required (MWh/d)	5	3	55	1	65
		Water consumption (m³/d)	5	3	0	1	56
		Waste production (gypsum, molten salt, catalyst)	5	3	-	1	-
	Operability	Plant availability (%), maintenance, redundancy	10	2	-	3	-
		Turn down ratio	5	2	-	2	-
	Commercial	Commercial Aspects	15	1		3	
Score (weight x rank)				340	81%	420	100%
Preference				2		1	

- SO₂ abatement options are narrowed down to one technology during the Pre-Feasibility Study
- A screening and ranking exercise helps to identify important differentiators other than cost

Flowsheet Development

Gas Cleaning and Balance Of Plant

Gas Cleaning and Balance Of Plant

Dry Gas Cleaning

- Optimised duct routing
- Interconnecting systems to enable emergency bypassing
- Insulation and materials of construction essential to manage corrosion

Wet Gas Cleaning Plant

- WGCP vendor selection
- Inlet and outlet process design criteria development for optimum catalyst screening intervals, acid plant equipment protection and acid quality

Cooling Water Plant

- Integrated cooling water network with SO₂ plant and/or smelter
- Optimum configuration to minimise footprint and water losses

Engineering Design Consideration

Advanced Engineering Design

- Advanced engineering tools were used for design the converter spray coolers and primary hoods

Minimising Corrosion

- Selecting the correct materials of construction essential to ensure plant availability and minimise maintenance but with cost in mind
- Several materials were used in the plant : CS, SS, HDPE, FRP, C267
- Covering only the essential sections of the plant to minimise corrosion potential and conserve heat

Enclosed building only for high risk corrosion and heat preservation area

Transport, Layout and Erection

- Large equipment designed to minimise site assembly but with logistical constraints in mind
- Constructability essential in the layout design to ensure adequate crane access to all equipment for erection but also maintenance
- Side assembly prior to installation to optimise construction

Sufficient
crane space
and
assembly
pad

Concluding Remarks

Concluding Remarks

- A smelter SO₂ abatement plant must have a well defined operating window and engineered agility to prevent it from affecting upstream operations
- Ensure the right technology is selected
- Don't forget the importance of the balance of plant, especially if it needs to share services with the smelter
- Custom design where it is needed to ensure it will work
- Equipment selection and equipment requires forward thinking such as how it will be installed, transported and maintained
